

Module creation and rollover in Canvas

*Module automatically published on the start date of teaching as held on the MAV record in SITS. Where blank will default to start date of the period referenced.

Modules become read only when all result records (SMR) are completed on SITS **or where no result records are created the date of the last day of teaching as held on the MAV record in SITS (whichever is later).

Students on spanning modules (modules taught over more than one academic year) will remain on the module in the start year i.e. a module site will not be created for each year

Academic course teams will need to maintain any modules from previous years where there are still students with outstanding assessments i.e. result records are not all completed
